For all numerical answers on this quiz – simplify as much as possible, but leave your answers in exact form (with square roots if applicable). Rationalize all denominators, if applicable.

1. Given the vectors below, draw each. In your drawings make sure to label each vector so that it's <u>clear</u> which is your answer.

2. Given:
$$\vec{a} = \langle 3, 2, -1 \rangle$$
 and $\vec{b} = \langle -2, 1, 5 \rangle$,
a) Find $\vec{a} + \vec{b}$ [2 pts] b) Find $\vec{a} \cdot \vec{b}$ [2 pts]

c) Find $proj_{\vec{a}} \vec{b}$. [3 pts]

- 3. Given the 3D points P(4, 6, -2) and Q(1, -7, 5),
 - a) Write a vector equation of line PQ. [3 pts]

b) Use your vector equation from part (a) to find the point where line PQ intersects the x-z plane. [1 pt]

4. Graph each set of parametric equations. [2 pts each]

c) Eliminate the parameter to write **x as a function of y**. [2 pts]

6. Andy is trying to solve the following math problem:

into the grid provided. [3 pts]

"Brock Purdy throws the football at an angle of 20 degrees with the horizontal, with a velocity of 30 feet per second. If the ball is released at 5 feet high, what is the height of the football at 0.8 seconds after it is released?"

In Andy's work, he writes: $height = -16(0.8)^2 + 30(0.8) + 5$

Andy's work contains an error. **Circle** his mistake, and then write the number and/or expression that should replace his incorrect element. [2 pts]
